PROFILE

Graphic Designer specializing in brand design, communication, and product marketing.

I have worked in the visual communication industry since 1999, managing and supervising the entire production process, from the initial creative concept through to the finished product. My experience ranges from traditional printed materials—such as advertising, packaging, and booklets—to online publishing, supported by strong technical expertise in printing, prepress, and customization processes, including screen printing and heat transfer.

My work is structured around two complementary areas:
Direct Account Management: professional consulting for companies that want to develop and manage their visual identity through direct contact and continuous supervision of every stage of production.

External Technical and Creative Support: partnerships with advertising agencies and style departments, providing technical and creative assistance for the development of complex projects and major brands.

As the founder of PH2 LAB, I offer a service based on hands-on expertise and practical experience, delivering effective visual solutions and coordinating directly with suppliers and technical departments to ensure the highest quality in the finished product.

SKILLS

1 Design and Strategic Skills

- Brief analysis, identification of priorities, and transformation of objectives into visual concepts.
- Development of consistent and scalable brand identity systems.
- Advanced knowledge of typography, colour, and composition.
- Ability to explain and support design choices using effectiveness criteria and data.
- Proactive approach: the ability to think and make decisions, rather than simply produce layouts.

2 Technical and Production Skills

- Advanced knowledge of typography, composition rules, and editorial grids.
- Colour management and calibration for print—offset, digital, and sublimation—and web applications.
- Preparation of print-ready artwork and management of professional production exports.
- Basic motion graphics skills for logo animation, UI elements, and dynamic content.
- 3D skills for packaging, product rendering, and photorealistic visualizations.

3 Tools and Digital Skills

- Adobe Creative Suite: expert proficiency in Photoshop, Illustrator, InDesign, and related applications.
- 3D Design: use of modelling and rendering tools, including Blender and Cinema 4D.
- Generative AI: informed use of artificial intelligence tools to optimize creative workflows.
- Content Creation: production of multi-format content for social media, websites, and digital media.

GRAPHIC DESIGNER

PROFESSIONAL EXPERIENCE

1997/1999 **Production Director – Upper Deck International, Weesp, Netherlands**

As Head of Printing & Production, I coordinated the technical production of premium products for internationally renowned sports icons such as Michael Jordan and the Italian National Team, the Azzurri. The role involved managing highly complex production challenges, including:

Colour Matching and Skin Tone Fidelity: Precise colour calibration and supervision of press start-ups to ensure accurate reproduction of skin tones and official brand colours on heavyweight paperboard materials.

Special Substrate Management: Supervision of printing on non-foldable materials and management of technical finishing processes, including security holograms, custom die-cutting, and metallic lamination.

Industrial Production Process: Strict inspection of press sheets and verification of print registration to ensure outstanding quality standards across large-scale production runs.

1999/2001 **Graphic Designer - Grafik Studio - Bologna**

2001/PRESENT **Freelance Graphic Designer – VAT Registered Professional**

I have worked as a freelance professional since 2001. Through PH2 LAB, I collaborate with companies, communication agencies, and style departments, managing creative and production projects from the initial phase through to final implementation.
